www.arrutigroup.com

Somos un grupo de empresas dedicadas al diseño, fabricación y venta de Elementos para Sustentación, Ensamblaje y Conducción de Electricidad. Líneas, subestaciones, catenaria ferrocarril, herramientas y accesorios, configuran parte del extenso catálogo de Arruti Group.

Arruti Group está formado por las siguientes empresas:

Industrias Arruti: empresa dedicada al diseño, desarrollo y fabricación de Herrajes y Accesorios para Líneas Eléctricas Aéreas de Transporte y Distribución.

Arruti Catenaria: especialistas en el diseño, desarrollo y fabricación de Herrajes y Accesorios para Electrificación de Líneas de Ferrocarril.

Arruti Aleaciones: fundición de aluminio y bronce por gravedad, especializada en el diseño y fabricación de Piezas de Fundición.

Arruti Subestaciones: empresa dedicada al diseño, desarrollo, fabricación y suministro de Conectores de Potencia para la Transmisión y Distribución de Energía.

Nuestro prestigio, basado en una larga experiencia y profundo conocimiento de lo que hacemos, se sustenta en la responsabilidad en todos nuestros proyectos. Materias primas, proveedores de servicios, medios técnicos y humanos de primera, se conjugan en Arruti Group para liderar diferentes mercados cuya exigencia nos ayuda a mejorar continuamente.

La proyección internacional de las distintas empresas de Arruti Group lo convierte en una referencia en el sector, valorándose altamente su calidad de fabricación, servicio, know-how y desarrollo de nuevos productos. Para ello, contamos con oficinas técnicas nutridas por expertos en las distintas áreas y un completo laboratorio que nos permite asegurar la calidad del producto desde el origen de los materiales hasta la recepción del producto por los clientes. Además contamos con la colaboración de laboratorios independientes internacionales de prestigio.

Los factores que han convertido a Arruti Group en líder son la alta exigencia en el origen de las materias primas –con una cuidadosa selección de proveedores de primer nivel– el capital humano– en el que se conjugan la experiencia y el dinamismo en perfecto equilibrio– la actitud orientada a la mejora continua y la responsabilidad por el medio ambiente. La transmisión de estos valores a todos los niveles nos han convertido en una eficiente organización, sensible a las necesidades de nuestros clientes.

We are a group of companies that designs, manufactures and sells Electricity Support, Assembly and Transmission Components. The Arruti Group's extensive catalogue of products includes electrical lines, substations, railway catenaries, tools and accessories.

Arruti Group is created by the following companies:

Industrias Arruti: the company designs, develops, manufactures and supplies Hardware and Accessories for Power Transmission and Distribution Lines.

Arruti Catenaria: specialized in designing, developing and manufacturing Hardware and Fittings for Overhead Railway Lines.

Arruti Aleaciones: a gravity-fed and bronze foundry specialized in the design and manufacture of Casting.

Arruti Subestaciones: we design, manufacture and sell Power Connectors for Power Transmission and Distribution.

Our reputation is based on years of experience and a thorough knowledge of the sector. Raw materials, services providers, technology and human resources are all factors that have made us leaders in different markets where the demand for excellence drives us to improve constantly.

The international presence of the member companies of the Arruti Group and the quality of our manufacturing, service and know-how, combined with the ability to develop new products, have made us a reference in the sector. Our offices are staffed with experts in a variety of disciplines and a full service laboratory that allows us to guarantee the quality of our products all the way from the origin of the raw materials to the delivery of the finished product to the client. We also work with highly renowned independent international laboratories.

Numerous factors have made Arruti Group a leader in the sector where we do business: the demand for excellence in the raw materials we use, which are procured from carefully selected suppliers; our staff members who combine experience and dynamism in perfect equilibrium; our quest for continuous improvement and our respect for the environment. Embracing these values at all levels of the organisation has enabled us to grow into a highly efficient enterprise that is sensitive to the needs of our clients.

Arruti Group est un groupement d'entreprises spécialisées dans la conception, la fabrication et la vente d'Éléments pour la Sustentation, l'Assemblage et la Conduction Électrique. Lignes, sous-stations, caténaire ferroviaire, outils et accessoires constituent une partie du vaste catalogue d'Arruti Group.

Nos entreprises :

Industrias Arruti: entreprise spécialisée dans la conception, le développement, la fabrication et la fourniture de Ferrures et Accessoires pour les Lignes Électriques Aériennes de Transport et Distribution.

Arruti Catenaria: entreprise spécialisée dans la conception, le développement et la fabrication de Ferrures et Accessoires pour les Lignes Aériennes de contact. Notre service couvre le secteur de l'électrification des voies ferrées.

Arruti Aleaciones: fonderie d'aluminium et de bronze par gravité, spécialisée dans la conception et la fabrication de Pièces de Fonte.

Arruti Subestaciones: nous sommes une entreprise spécialisée dans la conception, la fabrication et la fourniture de raccords de puissance pour la Transmission et la Distribution d'énergie.

Notre réputation, forgée sur une longue expérience et une connaissance approfondie de notre métier, repose sur la responsabilité dans tous nos projets. Matières premières, prestataires de services, de moyens techniques et humains de premier ordre, se conjuguent au sein d'Arruti Group pour diriger plusieurs marchés dont l'exigence nous aide à améliorer en permanence.

La vocation internationale des différentes entreprises d'Arruti Group en fait une référence dans le secteur, nos clients appréciant particulièrement sa qualité de fabrication, son service, son savoir-faire et le développement de nouveaux produits. Pour cela, nous disposons de bureaux d'études composés d'experts dans les différents secteurs et d'un laboratoire complet qui nous permet d'assurer la qualité du produit depuis l'origine des matières premières jusqu'à la réception du produit fini par les clients. De plus, nous bénéficions de la collaboration de laboratoires indépendants internationaux de renom.

Les facteurs qui ont hissé Arruti Group au rang de leader sont le haut niveau d'exigence dans l'origine des matières premières, qui se traduit par la sélection rigoureuse des fournisseurs de premier plan, son capital humain où se conjuguent l'expérience et le dynamisme en parfait équilibre, son attitude orientée vers l'amélioration continue et sa responsabilité envers l'environnement. La transmission de ces valeurs à tous les niveaux nous a permis de devenir une organisation efficace, sensible aux besoins de nos clients.

ARRUTI GROUP, GLOBAL GROUP

A lo largo de estos años, nuestra vocación e impulso nos ha llevado a expandir nuestro mercado. Arruti Group se ha convertido en un referente en el mercado internacional. Nuestros servicios y productos están en los mercados más importantes de Europa, América, África y Asia.

Over the years, in our quest to excel we have expanded into new markets. Arruti Group has become a reference in the international market and our products and services can be found in the most important markets of Europe, America, Africa and Asia.

Tout au long de ces années, notre vocation et notre essor nous ont amenés à étendre notre marché. Arruti Group est devenu une référence sur le marché international. Nos services et produits sont présents sur les marchés les plus importants d'Europe, d'Amérique, d'Afrique et d'Asie.

CIFRAS CLAVE • KEY FIGURES • CHIFFRES CLÉS

A lo largo de nuestra trayectoria las cifras de ventas han sido siempre ascendentes. La expansión internacional ha consolidado a Arruti Group como referente a nivel global en su sector.

Our sales have consistently increased over the course of the company's history. International expansion saw that Arruti Group has become a global reference for the sector.

Notre chiffre d'affaires n'a cessé de progresser au fil des années. L'expansion internationale a consolidé Arruti Group comme référence au niveau mondial dans son secteur.

Arruti Subestaciones

www.arrutigroup.com

ARRUTI SUBESTACIONES, S.A. ha alcanzado una posición destacada en el mercado eléctrico en cuanto a la fabricación y suministradores de Conectores eléctricos para subestaciones eléctricas hasta 500KV. A pesar de ser una empresa relativamente joven, hoy en día ARRUTI SUBESTACIONES es un referente mundial en la actividad que desarrolla.

Los valores que destacan en la actividad de la empresa son la capacidad de respuesta rápida, la flexibilidad en sus productos, en relación al diseño y plazos de entrega, y el seguimiento y vigilancia de la calidad a todos los niveles del proceso productivo.

Su clara vocación internacional le hace contar a ARRUTI SUBESTACIONES con una plantilla joven, dinámica y emprendedora totalmente volcada en dar un servicio óptimo y acorde a las necesidades del mercado y de sus clientes.

ARRUTI SUBESTACIONES, S.A. has reached a leading position in electrical market as per manufacture and supply of electrical power connectors for substations up to 500KV. As well as a young company, nowadays ARRUTI SUBESTACIONES, S.A. is a worldwide referent in its sector.

ARRUTI SUBESTACIONES, S.A.'s main skills include the quickest answer capacity of the sector, its products flexibility in terms of design and lead-times, and the quality survey and monitoring at every single level of our production chain.

Due to the group's policy which makes the company lead our future to strong implantation in export markets, ARRUTI SUBESTACIONES, S.A. is very proud of its young, dynamic and implicated staff that, which is working to give the best service to customers and according to market's requirements and exigences.

ARRUTI SUBESTACIONES, S.A. a atteint une position de choix dans le marché électrique en ce qui concerne la fabrication des Raccords puissance pour des sous-stations électriques jusqu'à 500KV. Bien que ce soit une entreprise relativement jeune, ARRUTI SUBESTACIONES, S.A. est de nos jours, une société de référence mondiale dans l'activité qu'elle développe.

Les valeurs les plus significatives sont la capacité de donner une réponse rapide aux clients, la flexibilité dans ses produits quant au design et délai de livraison, le suivi et la supervision de la qualité à tous les niveaux du processus productif.

La vocation internationale et évidente d'ARRUTI SUBESTACIONES, S.A. lui permet de disposer d'un personnel jeune, dynamique et entreprenant totalement consacré à donner un service optimal en accord avec les besoins du marché et des clients.

- El Departamento de Diseño y Desarrollo garantiza la correcta fabricación de nuestros productos utilizando las más modernas técnicas informáticas.
- Los sistemas CAD son utilizados para desarrollar los proyectos de nuevos productos de Herrajes y composición de conjuntos aplicables a las líneas, así como de Conectores Eléctricos para Subestaciones.
- Durante el desarrollo de nuestros productos se realizan los ensayos tipo mediante nuestros equipos de Laboratorio.
- Nuestro laboratorio químico-metalográfico nos permite asegurar en todo momento la correcta utilización de materiales.
- Se dispone de un amplio equipo de calibración y medición para comprobar que todos nuestros productos cumplen con las normativas CEI, UNE, EN, NEMA, etc. aplicables a dicho producto.
- El laboratorio de ensayos mecánicos nos garantiza todas las características mecánicas exigidas a nuestros productos.
- Laboratorios de ensayos eléctricos para la realización de ensayos de resistencia y calentamiento.

-
- Design and Development Department guarantees the right production of our products by the most updated computerised techniques.
 - CAD systems are used in order to develop the projects of new products of Fittings and sets composition applied to Lines, as well as Electric Connectors for Substations.
 - During the development of our products type tests are made by means of our Laboratory equipment.
 - Our chemical-metalographical laboratory assures the right use of materials at any time.
 - There is a varied equipment for calibration and measurement, intended to test that all our products achieve the IEC, UNE, EN, NEMA, etc. Standards, relevant to the product.
 - Mechanical test Laboratory guarantees all the mechanical characteristics required to our products.
 - Electrical test Laboratory for resistance and heating tests.

- Le Département de Dessin et Développement, garanti la correcte fabrication de nos produits, avec les techniques informatiques le plus modernes.
- Les systèmes CAD sont utilisés pour développer les prôjets de nouveaux produits d'Accessoires et arrangement d'ésambles applicables aux Lignes, de même que de Raccords Electriques pour Substations.
- Pendant le développement des produits, des essais type sont faites par nos équipes de Laboratoire.
- Notre laboratoire chimique-métallographique nous permet d'assurer constamment l'utilisation des matériaux.
- Nous disposons d'un ample équipe de calibrage et mesurage pour vérifier que tous nos produits accomplent les réglementations CEI, UNE, EN, NEMA, etc. applicables à dite produit.
- Le Laboratoire l'essais mécaniques nous garanti toutes les caractéristiques mécaniques exigés à nous produits.
- Laboratoire l'essais électriques pour les essais de résistance et chauffage.

The image features a dark gray background with a complex, abstract pattern of white and light gray wavy lines. These lines are thick and fluid, resembling brushstrokes or organic, flowing paths. They are scattered across the frame, with some lines crossing each other. The overall effect is one of dynamic movement and energy.

The image features a dark gray background with a complex, abstract pattern of white and light gray wavy lines. These lines are thick and fluid, resembling liquid or energy flows, and they crisscross the frame in various directions. The text 'Powering Progress' is centered horizontally and partially overlaid by these lines.

Powering Progress

Características Técnicas Technical Characteristics Caracteristiques Techniques

Nuestro principal objeto al crear el presente catálogo, no es otro que el de mostrar una parte de las diferentes piezas de nuestros fabricados, con las cuales, creemos tendrán resueltos los problemas que se les puedan presentar.

CARACTERISTICAS TECNICAS

Con el fin de ofrecer la máxima garantía y calidad a nuestros productos, ASSA siguiendo los principios de las normas nacionales e internacionales (UNE-21021, NEMA CC1, Etc.) ha diseñado una línea de conectores capaces de poder trabajar bajo intensidades de paso superiores a la de los propios conductores.

TIPO DE CONECTORES

- 1) Material de puesta a tierra.
- 2) Conectores de Bronce o Aluminio, diseñados con tornillería vista, con 2 o 3 tapetas independientes para mejorar el buen contacto y evitar las tensiones mecánicas.
- 3) Conectores Bimetálicos, compuestos de una parte de Bronce y otra de Aluminio unidos mediante una placa Bimetálica (CUPAL) montada y sellada debidamente en fábrica.
- 4) Conectores monometálicos (ANODO MASIVO) para Alta o Muy Alta Tensión, diseñados con tornillería embutida y aristas redondeadas, a fin de evitar bajo condiciones normales los fenómenos de efecto corona y RIV, independientemente, éstos conectores se pueden utilizar en tensiones inferiores.
- 5) Contracontactos para pantógrafos.

MATERIALES

Los materiales empleados en nuestros productos preferentemente son los siguientes :

- Aleación de Cobre 85%Cu-5%Sn-5%Zn-5%Pb - CB491K y CC491K (s/Norma UNE-EN 1982-1999)
- Aleación de Aluminio Al 7Si 0,6Mg - EN AC-42200 (s/norma (UNE-EN 1706-1998)
- Aleación de Cobre (Forja de Latón) UNE EN 12165-1999
- Tornillería de Acero Inoxidable AISI-304(A2-70/80) ó AISI-316(A4-80) (UNE-EN 10088-1-2-3)

	BRONCE	ALUMINIO	TORNILLERIA
Resistencia a la Tracción	21 Kg/mm ²	16+28 Kg/mm ²	70/80 Kg/mm ²
Límite de Elasticidad	10 Hb	22 Hb	40 Hb
Alargamiento	10 %	3 %	45 %
Dureza Brinell	60	65+80	150
Resistividad	12/14 μΩ cm	4 μΩ cm	

INSTRUCCIONES DE MONTAJE

Hay que limpiar los conductores antes de colocarlos en el conector, con un cepillo de púas se cepillan las gargantas de los conectores y el área de contacto de los conductores, en una longitud superior a la que cubrirá el conector. A los conectores de Aluminio se debe aplicar una capa de grasa de contacto, cuyo punto de goteo no sea inferior a 160°C. Se colocan los componentes de los conectores sobre los conductores aplicando un ligero par de apriete de aproximación (50%) verificando que las tapas queden colocadas simétricamente.

Seguidamente, siempre con una llave dinamométrica, se aplican los pares de apriete en función del diámetro de los tornillos, según los valores indicados a continuación :

TORNILLOS	M-8	M-10	M-12	M-14	M-16
PAR NOMINAL(Kg.m)	2	3	5	7	10

El apriete de los tornillos se realizará al tresbolillo en las tapas con 4 ó 6 tornillos y alternativamente en las tapas con 2 tornillos, así como se indica en la figura adjunta.

Our meaning by making this catalogue, is to show part of the different pieces we manufacture, with which, we think it can solve any problem that you may have.

TECHNICAL CHARACTERISTICS

In order to offer the total guarantee and quality to our products, ASSA has designed, following the national and international standard rules (UNE-21021, NEMA CC1, Etc.), a connectors line, capables of working under superior intensities than conductors itself.

CONNECTORS TYPE.

- 1) Earthing material.
- 2) Bronze or Aluminium connectors, designed with seen bolts, with 2 or 3 independent covers, for better contact and avoid mechanic tensions.
- 3) Bimetallic connectors, made of one Bronze part and another of Aluminium jointed by a bimetallic plate (CUPAL) properly assambled and sealed in factory.
- 4) Monometallic connectors (MASSIVE ANODE) for High or Very High Tension, designed with shunk bolts and rounded edges, in order to avoid under normal conditions the phenomenons of corona effect and RIV, anyway, these connectors can also be used for lower tensions.
- 5) Countercontacts for pantographes.

MATERIALS

The most important materials used in our products are the following:

- Copper Alloy 85%Cu-5%Sn-5%Zn-5%Pb – CB491K y CC491K (s/Norma UNE-EN 1982-1999)
- Aluminium Alloy Al 7Si 0,6Mg – EN AC-42200 (s/norma (UNE-EN 1706-1998)
- Copper Alloy (Forged Brass) UNE EN 12165-1999
- Inox. Steel Screw AISI-304(A2-70/80) ó AISI-316(A4-80) (UNE-EN 10088-1-2-3)

	BRONZE	ALUMINIUM	SCREWS
Tensile strength	21 Kg/mm ²	16+28 Kg/mm ²	70/80 Kg/mm ²
Yield limit	10 Hb	22 Hb	40 Hb
Stretching	10%	3%	45%
Brinell hardness	60	65+80	150
Resistivity	12/14 μΩ cm	4 μΩ cm	

INSTALLATION INSTRUCTIONS

Conductors must be cleaned before connectors are installed, with a wire brush should be cleaned connectors and contact area of conductors, a bigger part than what it is covered by connectors. The Aluminium connectors should be covered by contact grease, which dropping point shouldn't be less than 160°C.

Once all parts of connectors are assambled on conductors applying a approaching torque (50%) and verifying the simmetry of covers. Afterwards, tightening torque is applied, depending on bolts diameter, always with a dynamometric wrench adjusted to the following rates:

BOLTS	M-8	M-10	M-12	M-14	M-16
NOMINAL TORQUE (KG.M)	2	3	5	7	10

Bolts of covers of 4 or 6 bolts should be clamped in quincunxes, and in covers with 2 bolts alternatively, as shown on these sketches.

Notre fin pour faire ce catalogue, est montrer une partie de différentes pièces de notre fabrication, et resudre de possibles problemes.

CARACTERISTIQUES TECHNIQUES

A fin d'offrir le maximum de garantie et qualité a nos produits, ASSA suivant les principes desprescriptions national et international (UNE-21021, NEMA CC1, Etc.) a déssiné une ligne de raccords capables de pouvoir travailler sous intensités de pas superieurs aux conducteurs.

TYPES DE RACCORDS

- 1) Materiel de misse à terre.
- 2) Raccords de Bronze ou Aluminium, dessiés avec boulonnerie vue, avec 2 ou 3 couvercles independantes pour avoir mieux contact et éviter les tension mécaniques.
- 3) Raccords bimétalliques, Bronze et Aluminium raccordés avec une plaquette bimétallique (Cupal) monté a l'usine.
- 4) Raccords monométalliques (ANODO MASSIVE) pour haute ou très haute tension, avec boulonnerie emboutie et angles arrondies, a fin d'éviter sous conditions normeaux l'effect couronne et RIV, mais ces raccords peuvent être utilisés aussi pour tension inferieurs.
- 5) Contrecontacts pour pantographes.

MATERIEL

Le materiel utilicé dans nos produits sont les suivantes:

- Alliage de Cuivre 85%Cu-5%Sn-5%Zn-5%Pb - CB491K y CC491K (s/Norma UNE-EN 1982-1999)
- Alliage de Aluminium Al 7Si 0,6Mg - EN AC-42200 (s/norma (UNE-EN 1706-1998)
- Alliage de Cuivre (Laiton Forge) UNE EN 12165-1999
- Visserie en Acier Inoxidable AISI-304(A2-70/80) ó AISI-316(A4-80) (UNE-EN 10088-1-2-3)

	BRONZE	ALUMINIUM	BOULONNERIE
Résistance à la traction	21 Kg/mm ²	16+28 Kg/mm ²	78/80 Kg/mm ²
Limite de l'élasticité	10Hb	22 Hb	40 Hb
Allongement	10%	3%	45%
Dureté Brinell	60	65+80	150
Résistivité	12/14 $\mu\Omega$ cm	4 $\mu\Omega$ cm	

INSTRUCTIONS DE MONTAGE

Les conducteurs à raccorder il faut les nettoyer avec une brosse metallique ainsi que les raccord. Sur les raccords d'aluminium il faut mettre graise de contact, la graise ne doit pas avoir un point d'égouttement inferieur à 160°C. Mettre en place correctement tous les parties de raccord serrer à moitié du couple (serrage d'approche), verifier la position du raccord.

Après, toujours avec une clé dynamométrique réglée aux valeurs ci-après, serrer au couple:

BOULONNERIE	M-8	M-10	M-12	M-14	M-16
COUPLE NOMINAL (Kg.m)	2	3	5	7	10

Faire le serrage de boulonnerie comme se montre dans le dessin ci-après.

The image features a dark gray background with a complex, abstract pattern of white and light gray wavy lines. These lines are thick and fluid, resembling brushstrokes or energy paths, and they crisscross the frame in various directions. The text 'Powering Progress' is centered horizontally and partially overlaid by these lines.

Powering Progress

Earthing Materials Material de Puesta a Tierra Matériel de Mise a la Terre

- Earthing Materials / Material de Puesta a Tierra / Matériel de Mise a la Terre

The background features a grey-to-white gradient with several thick, white, wavy lines that resemble brushstrokes or energy pulses. These lines are layered and overlap, creating a sense of movement and depth. The text 'Powering Progress' is centered horizontally and partially overlaid by these lines.

NOTA: OTRAS MEDIDAS A INDICAR
 NOTE: OTHER DIMENSIONS UPON REQUEST
 NOTE: D'AUTRES DIMENSIONS À PRECISER

The image features a dark gray background with several overlapping, wavy white lines of varying thicknesses. These lines create a sense of movement and depth, resembling a stylized, abstract landscape or perhaps a network of connections. The lines are most prominent in the lower half of the frame, with some extending towards the top. The overall aesthetic is modern and minimalist.

Powering Progress

Bronze Connectors Conectores de Bronce Raccords en Bronze

- Straight Connectors / Conectores Rectos / Raccords Droits
- Bend Connectors / Conectores Acodados / Raccords Coudes
- T Connectors / Conectores en T / Raccords en T

- Expansion Connectors / Conectores de Dilatación / Raccords Souples
- Supports / Soportes / Supports
- Support for Flatbars / Portapletinas / Porte-Barres
- Fix Points / Puntos Fijos / Points Fixes

The background of the image is a solid, medium-grey color. Overlaid on this background are numerous white, wavy, and somewhat chaotic lines of varying thickness. These lines flow across the frame, creating a sense of movement and energy. Some lines are thicker and more prominent, while others are thin and delicate. The overall effect is that of a complex, organic network or a series of interconnected paths.

The image features a solid grey background with a complex, abstract pattern of white, wavy, and somewhat chaotic lines. These lines vary in thickness and overlap, creating a sense of movement and depth. The lines are most concentrated in the lower half of the image, with some extending towards the top. The overall effect is that of a dynamic, organic structure.

The image features a solid grey background with several overlapping, white, wavy lines that resemble brushstrokes or energy pulses. These lines are scattered across the frame, with a notable concentration on the right side where they appear to converge or originate from. The lines vary in thickness and opacity, creating a sense of movement and depth.

The background features a grey-to-white gradient with several thick, white, wavy lines that flow across the frame, creating a sense of motion and energy. The lines vary in thickness and direction, some curving upwards and others downwards, resembling stylized waves or paths.

The image features a solid grey background with several overlapping, white, wavy lines that resemble brushstrokes or liquid splashes. These lines are scattered across the frame, with a notable concentration on the right side. The text 'Powering Progress' is centered horizontally and partially overlaid by these white lines.

The image features a solid grey background with a complex, abstract pattern of white, wavy, and somewhat chaotic lines. These lines vary in thickness and overlap, creating a sense of movement and depth. The lines are most concentrated in the lower half of the image, where they form a dense, tangled web. The overall effect is reminiscent of a stylized, energetic graphic or perhaps a representation of data flow or network connections.

The background of the image is a solid, medium-grey color. Overlaid on this background are numerous white, wavy, and somewhat chaotic lines of varying thickness. These lines flow across the frame, creating a sense of movement and energy. Some lines are thicker and more prominent, while others are thin and delicate. The overall effect is that of a complex, organic network or a series of interconnected paths.

The image features a dark gray background with several overlapping, wavy white lines of varying thicknesses. These lines create a sense of movement and depth, resembling a stylized, abstract landscape or perhaps a network of paths. The lines are most prominent in the lower half of the frame, with some extending towards the top. The overall composition is dynamic and modern.

The image features a dark gray background with several overlapping, wavy white lines of varying thicknesses. These lines create a sense of movement and depth, resembling a stylized, abstract landscape or perhaps a network of connections. The lines are most prominent in the lower half of the frame, with some extending towards the top. The overall aesthetic is modern and minimalist.

ARRUTI SUBESTACIONES, S.A. soluciona la conexión AL-AL y AL-CU. con la técnica ampliamente conocida del ANODO MASIVO y aceptada por las compañías eléctricas.

Como es sabido, cuando los dos metales, AL-CU. están en íntimo contacto y ambos sumergidos en un ambiente polutivo, puede desencadenarse el fenómeno de electrólisis, en el que el CU. juega el papel de cátodo, el AL. el de ánodo y el ambiente el de electrólito. No hay electrólisis si falta uno solo de los tres elementos. En este fenómeno, iones de AL. son arrancados del ánodo y depositados sobre el cátodo, resultando la destrucción del ánodo de un modo directamente proporcional a la agresividad o fortaleza del electrólito o ambiente. Puede también deducirse, y de hecho se demuestra, que aquellas uniones AL-CU. sumergidas en ambientes limpios, los rurales por ejemplo, no sufren daño alguno siempre que se mantenga el ambiente en estas condiciones, lo que nunca está en la mano del usuario.

Al objeto de prevenir la destrucción del conector y defenderlo de agentes exteriores ajenos a toda instalación, se emplean conectores ANODO MASIVOS con los que se garantiza el control de la corrosión, hasta un punto de saturación en el cual la masa de la conexión sea mas que suficiente para garantizar el paso a través de la carga inicialmente calculada, con notable margen de seguridad. Naturalmente, la bondad del sistema descansa fundamentalmente en determinadas y precisas prácticas de montaje, a la vez simples y al alcance de todo usuario.

Los conectores ANODO MASIVOS, por su gran masa de AL. como su nombre sugiere, ofrecen una mayor superficie de radiación como ventaja adicional. Si bien el sistema garantiza el control de la corrosión galvánica inherente a la unión AL-CU. interior, no elimina lógicamente la corrosión exterior. Precisamente por su masa excedente o "MASA DE SACRIFICIO" varias veces la del conductor, el conector resistiría los embates exteriores con mucha mayor longevidad que la del conductor mismo.

Eléctricamente los conectores garantizan la trilogía de toda conexión de calidad internacionalmente exigida.

- Caída de tensión entre extremos del conector igual o inferior a la de igual longitud del conductor que une.
- Temperatura en régimen de trabajo, inferior a la de los conductores que conecta.
- Dimensiones y diseño que garantiza el paso de la carga máxima exigible a los conductores que une, con una resistencia eléctrica mínima y estable a través del tiempo.

Características garantizadas, siempre que la conexión se haya realizado de acuerdo con las prácticas de montaje y pares de apriete recomendados.

DISEÑO ANTIEFLUVIOS

Este diseño especial se emplea para conexiones cuya tensión de servicio sea 220 KV. mínima y 550 KV. máxima.

Básicamente, el conector es igual en éstas, como en inferiores tensiones, sin embargo el diseño exterior varía en los puntos siguientes:

- Bordes, aristas y vértices totalmente redondeados.
- Tornillería completamente sumergida.

De ello resulta un conector con forma tendente a la esfericidad, con ausencia de puntas, para eliminar las pérdidas por efluvios (Efecto Corona) y mantener el nivel de ruidos RIV (Voltaje de Radio Interferencias) inferior a los 100 μ V., límite internacionalmente admitido.

Si bien el diseño antiefluvios se utiliza dentro del margen de tensiones aludidas no hay contraindicación alguna, para que éstos conectores puedan también trabajar en tensiones inferiores.

ARRUTI SUBESTACIONES, S.A. has solutions for AL-AL and AL-CU connections using MASSIVE ANODE design approved after testing by main Power Electric Companies.

Copper and Aluminium are often put in contact, and outdoors with moisture and pollution galvanic corrosion begins, with the Cu. as cathode and Al. as anode and the anode and ambient as electrolyte. If one of those three elements isn't there the electrolysis doesn't occur. In this phenomenon, Al. ions go to the cathode, very soon the destruction of Al. anode starts in an industrial outdoors ambient. As it is not easy to assure a clean and dry ambient some precautions have to be taken in the design and manufacturing of connectors in order to avoid serious failures in the electric networks.

With Massive Anode connectors the corrosion is controlled, when the corrosion is advanced there is yet a sufficient mass in the connection to assure the secure pass of the current. In any case it is necessary to care the instructions for a correct installation of the connectors. Besides the Big Mass of the Massive anode connectors permit a wide surface to irradiate heat.

Massive Anode design not only guarantee the control of the galvanic corrosion between Al and Cu, but also the improvement of the resistance to the exterior corrosion. Due to the excedentary mass, mass to be sacrificed, connector will endure longer the attack of outdoor agents than conductors itself.

A quality connection demands three conditions that M.A. connectors fulfil:

- Same or shorter tension drop in connector than of same length of conductor in contact.
- In service less temperature in the connector than in the conductors in contact.
- Design and dimensions suitable for the max current on service, electric resistance as short as possible and of a permanent value.

The Characteristics are guaranteed, when connection has been made following the installation instructions and tightening torque advised.

ANTIEFFLUVIUM DESIGN

In high tension of min.220 KV and max.550 KV. networks connections are used this design.

This type of connector is basically the same for these tensions as for lower ones, but the shape has the following changes:

- All edges rounded
- All bolts sunk

With it the connectors shape is almost spherical, to avoid effluvium (Crown Effect) and keeping the noise level (RIV) lower than 100 μ V.

Even these connectors are used for the mentioned voltage, there is nothing against to use this design with lower voltages too.

ARRUTI SUBESTACIONES, S.A. a donné la solution pour la connexion AL-AL et AL-CU. avec la technique Anode Massive, acceptée pour les Companies Electricques.

Au moment que les connexions AL-CU sont en contact dans un ambiance de pollution, il peut avoir le phenomene d'électrolyse, dans le quel le CU est le cathode, le AL l'anode et l'ambiance l'électrolyte. S'il manque un des ces trois elements il ne se produit pas l'électrolyse. Dans ce phenomene ions de AL. partent et se depossent sur le cathode, ayant un destruction du anode en proportion à la force or agressivité de l'ambiance ou électrolyte. Les connexions AL-CU dans ambiance propes ne sont pas abimés si ces conditions sont mantenus.

A fin d'éviter la destruction du raccord et lui defendre d'agents extérieurs, il est utilisé les raccords ANODE MASSIVE pour garantir le contrôle de corrosion, au point de saturation dans le quel la masse du connexion doit être suffissant pour garantir le pas à travers la charge intiel du calcul, avec grand marge de securité. Sans doute il faut agir correctement selon les conseilles de montage des connexions.

Les raccords ANODE MASSIVE, avec grand masse de AL, offris une surface de radiation comme avantage additionel. Même que le système garantit le contrôle de corrosion galvanique interier des jonctions AL-CU, ce-ci n'elimine pas la corrosion exterior. Précisément pour la masse excedante ou Masse de Sacrifice, plusieurs fois celle du conducteur, le raccord résistira beaucoup plus long temps que le conducteur.

Electricquement les raccord garanti la trilogie de toute connexion de qualité internationalement demandé.

- Tombe de tension de raccord égal ou moins que la longueur du conducteur en contact.
- Temperature pendant le travail, inferieur au conducteurs en connexion.
- Dimension et dessin garantissant le pas de charge max. demandé aux conducteurs, avec une resistance électrique minimum et stable pendant le temps.

Les caracteristiques sont garanties, toujours si la connexion a été fait selon les conseilles de montage et avec les couples recommandés.

DESSIN ANTIEFFLUVES

Ce dessin est employé pour connexions en tension de travail du 220 KV. min. et 550 KV. max.

Basiqement, le raccord est en ces tensions comme dans ce des tensions inferieurs, mais le dessin exterior a les differences suivantes:

- Tous les angles arondis.
- Toute la visserie emboîtée.

Comme resultat le raccord a une forme sphérique, a fin d'éviter les pertes par effluves (Effect Couronne) et maintenir le niveau de bruit RIV inférieur aux 100 μ V.

Bien que le dessin antieffluves de raccords est utilisé pour les tensions indiqués, ces-ci peuvent être utilisés avec des tensions inferieurs.

The image features a solid grey background with a complex, abstract pattern of white, wavy, and somewhat chaotic lines. These lines vary in thickness and overlap, creating a sense of movement and energy. The lines are most concentrated in the lower half of the image, with some extending towards the top. The overall effect is that of a dynamic, organic structure.

The image features a solid grey background with a complex, abstract pattern of white, wavy, and somewhat chaotic lines. These lines vary in thickness and overlap, creating a sense of movement and depth. The lines are most concentrated in the lower half of the image, with some extending towards the top. The overall effect is that of a dynamic, organic structure, possibly representing a network or a path.

The background features a grey-to-white gradient with several thick, white, wavy lines that flow across the page, creating a sense of movement and energy. The lines vary in thickness and direction, some curving upwards and others downwards, resembling stylized waves or paths.

The background features a light gray to dark gray gradient. Overlaid on this are numerous white, wavy, and somewhat chaotic lines of varying thicknesses, some appearing as thin outlines and others as thicker, more prominent strokes. These lines create a sense of movement and complexity.

The background features a grey-to-white gradient with several thick, white, wavy lines that resemble brushstrokes or energy pulses. These lines are layered and overlap, creating a sense of movement and depth. The text 'Powering Progress' is centered horizontally and partially overlaid by these lines.

The image features a solid grey background with several overlapping, white, wavy lines that resemble brushstrokes or fluid motion. These lines vary in thickness and direction, creating a sense of dynamic energy. A thin, horizontal black line is positioned across the middle of the page, passing through the text.

The background features a light gray to dark gray gradient. Overlaid on this are several thick, white, wavy lines that flow across the page, creating a sense of movement and energy. The lines vary in thickness and direction, some curving upwards and others downwards.

The image features a solid grey background with several overlapping, white, wavy lines that resemble brushstrokes or liquid splashes. These lines are scattered across the frame, with a notable concentration on the right side. The text 'Powering Progress' is centered horizontally and partially overlaid by these white lines.

The image features a dark gray background with several overlapping, wavy white lines of varying thicknesses. These lines create a sense of movement and depth, resembling a stylized, abstract landscape or perhaps a network of paths. The lines are most prominent in the lower half of the frame, with some extending towards the top. The overall aesthetic is modern and minimalist.
